DETAILED ACTION

Drawings

1. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

2. The substitute specification is accepted.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1 and 2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1, line 1, the phrase "protection a mains" is unclear.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2836

4. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior (APA) in view of Ruckman (USPN 4,571,656). APA discloses an over-voltage protection device (see fig. 1) for protecting mains, the device voltage mains a gas discharge arrestor (3), a varistor (4), and a thermal fuse element (5) arranged to ensure to a thermal disconnection of the device from the mains, the varistor (4), the gas discharge arrestor (3), and the thermal fuse (5) connected in series with each other between two lines (1 and 2). APA does not disclose a resistor connected in parallel to the varistor of the protection device, Ruckman discloses a resistor (36 shown in fig. 1). It would have been obvious to one skill in the art to modify the circuit of APA with a resistor as taught by Ruckman in order to protect against transient impulse surge over-voltage.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will

Art Unit: 2836

the statutory period for reply expire later than SIX MONTHS from the date of this final action.
